Explanations

Part-A-General Intelligence and Reasoning

Q.1 · Answer (B) 90

Each word is coded as the sum of its letters' places in the alphabet: ECTOPIC = 5 + 3 + 20 + 15 + 16 + 9 + 3 = 71 and EDIFY = 5 + 4 + 9 + 6 + 25 = 49. So ECONOMY = 5 + 3 + 15 + 14 + 15 + 13 + 25 = 90.

Q.2 · Answer (A) U

Q is at the right end with R next to Q, and S sits next to both R and T, so from the right the row runs Q, R, S, T. That leaves U at the left end: U, T, S, R, Q.

Q.3 · Answer (D) UBKUS

The first and last letters become their opposite letters (A↔Z, T↔G), the second moves +1, the third +2 and the fourth +1: AGENT → ZHGOG and CHAIR → XICJI. So FAITH → UBKUS.

Q.4 · Answer (B) RACLUFE

The first three letters are reversed and then the last four: CAP ABLE → PAC ELBA and AUC TION → CUA NOIT. So CAR EFUL → RAC LUFE: RACLUFE.

Q.5 · Answer (A) Mother's mother

B is A's sister and C is B's father, so C is A's father; D is C's wife, so A's mother; and E is D's mother, so A's mother's mother.

Q.6 · Answer (B) 3,2,5,1,4

'Dif-' comes before 'dis-', so Different is first; then Discipline (disc-), Disregard (disr-), Distinct and Distinguish ('distinc-' before 'disting-'): 3, 2, 5, 1, 4.

Q.7 · Answer (D) 738

Each number is cubed and added to itself: $8^3 + 8 = 520$ and $10^3 + 10 = 1010$. So $9^3 + 9 = 729 + 9 = 738$.

Q.8 · Answer (D) 3 and 6

After interchanging 3 and 6: $42 \div 6 \times 3 + 9 - 7 = 7 \times 3 + 2 = 23$.

Q.9 · Answer (D) Only conclusions I and III follow

Every pullover is a bottom and every bottom is a pant, so all pullovers are pants (I), and so some pants are pullovers (III). Nothing makes every pant a top, so II does not follow.

Q.11 · Answer (C) FNTS

The first letters move +3 (Z, C, F, I, L), the second +5 (D, I, N, S, X), the third +7 (F, M, T, A, H) and the fourth +9 (A, J, S, B, K), wrapping round after Z. The missing cluster is FNTS.

Q.13 · Answer (B) PFL

The cluster is reversed and its letters moved +2, +3 and +4: PLC → CLP → EOT and DLG → GLD → IOH. So HCN → NCH → PFL.

Q.14 · Answer (A) 400

The terms are the squares of 2, 6, 12, 20, 30 and 42 (1 × 2, 2 × 3, 3 × 4 and so on), so the missing term is $20^2 = 400$.

Q.16 · Answer (C) 64

Each term is 17 more than the one before: 47 + 17 = 64, and 64 + 17 = 81.

Q.17 · Answer (A) GT

The first letters move +2, +3, +5, +7 (the primes), so +11 next: V + 11 = G, wrapping round after Z. The second letters move +1, +2, +3, +4, so +5 next: O + 5 = T. The next cluster is GT.

Q.18 · Answer (D) Arun

Arun and Ajay both sit next to Boby, so they are his two neighbours. Ajay is to his immediate left, which leaves Arun to his immediate right (the table runs Krishna, Arun, Boby, Ajay, Shama, Suman).

Q.20 · Answer (A) 24
After replacing the letters: 28 – 80 ÷ 16 × 5 + 21 = 28 – 5 × 5 + 21 = 28 – 25 + 21 = 24.

Part-B-General Knowledge and General awareness
